Angeles,

Thanks very much for the update. I just received the email below from Hickam Communities. They completed dripline sampling and have the results back. While they have not released this data to the resident yet, that information should be forthcoming soon.

For older homes like this that have not had excavation or grading activities, exposed surface soils between the foundation and the dripline are considered most likely to have residual termiticide contamination, and generally represent the area of highest potential inadvertent ingestion concerns for toddlers and others in regular contact with the soils.

The results show no exceedances above our unrestricted use environmental action levels for any of the four pesticides detected.

This is great news and shows that there is no termiticide release at Ms. [Personal Matters / Ex.] home. TetraTech will be conducting air sampling next week per their earlier commitment to Ms. [Personal Matters / Ex.] I'll keep you informed.

Aloha Fenix & Eric:

Just as FYI- Please find attached Tetra Tech's--Summary of Findings Report for Drip Line Soil Sampling, 1708 Harmon Avenue, Joint Base Pearl Harbor-Hickam, Oahu, Hawaii.

Also, Air sampling at this location is currently scheduled the week of April 30th.

Thanks and Regards,

Roger
